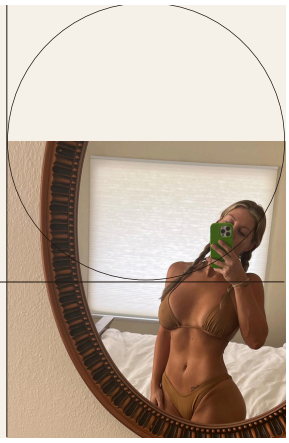
SUMMER BODY CHALLENGE



BEAT THE BLOAT

Summer Body *De-bloat*	No one wants to feel bloated for the beach or pool days. These are the best tips for beating the bloat.
What causes most bloating?	Chronic bloating is a sign of poor gut health, leaky gut or SIBO. Refer to gut health guide for more info. Acute bloating is often caused from gas, constipation or water retention.
Tip 1:	Gas comes from too many carbs or protein in a sitting. Eating smaller, more frequent meals can help prevent gas. Also, SLOW DOWN GIRL! No one is gonna take it. When you don't chew food enough or swallow too fast it causes gas & bloating.
Tip 2	If bloating is really severe and uncomfortable, fasting can improve these symptoms! Give your guts a break babe! Try going 12-18 hours at first and work up to 24. Stay hydrated
Tip 3	• Avoid gassy veg like cauliflower, broccoli & cabbages • Asparagus is a natural diuretic. It will help naturally flush out water. • Green tea: these help to pull excess water and are easy on digestion. Add some fresh ginger!
Alcohol	If you're going to enjoy a day of drinks stick to the vodka, tequila and gins. These are more calorie and bloat friendly, too much sugar will lead to bloat and hangover! PS: B vitamins (6&12) help to break down the booz faster! Your liver will thank you! Too much carbonation will also bloat the belly so watch the soda or tonic water. You're better off with a splash of real juice.

Fruits	Fruits will almost NEVER cause bloating! Stick to fresh fruit, yogurt and light proteins for a flat tummy & nourished body
